ONLINE STUDENT ATTENDANCE MANAGEMENT SYSTEM

NAME - MATTI AVISHYA

ROLL NO. - 2520030482

ABSTRACT

- The **Student Attendance Management System** is a software application designed to automate and streamline the process of recording, tracking, and managing student attendance in educational institutions. Traditional manual methods are often time-consuming, error-prone, and inefficient, leading to difficulties in generating accurate reports and maintaining transparency. This project leverages a structured database, user-friendly interface, and secure authentication to provide a reliable solution.

- The system enables teachers and administrators to mark attendance digitally, store records securely, and generate comprehensive reports on student participation. Core modules include student registration, attendance marking, report generation, and user management. By integrating backend logic with a centralized database, the system ensures consistency, accuracy, and ease of access.
- Beyond basic functionality, the project can be extended with advanced features such as biometric or RFID integration, automated notifications to parents, and analytical dashboards to monitor attendance trends. Overall, the Student Attendance Management System enhances efficiency, reduces paperwork, and supports data-driven decision-making in academic environments.

CONCLUSION:

- The Student Attendance Management System is a useful application that helps educational institutions manage and track student attendance efficiently. It reduces the manual work of maintaining attendance records and minimizes errors. The system allows teachers or administrators to record attendance easily, while students can view their attendance details and percentage whenever required. It also helps in generating reports quickly, which improves transparency and saves time. Overall, this system makes the attendance process more organized, reliable, and accessible, improving the overall management of student records in schools or colleges.
